Team Pitch Deck Sprint #1 Planning Document

1 SPRINT OVERVIEW

1.1 OVERVIEW

After reviewing the requirements of our project and a discussion over the priority level of said requirements, our team decided to start with the creation and implementation of the basic game features. For Sprint #1, our team plans to have the basic design of the Game HTML page completed along with the features of the user picking their bid, choosing the trump suit, and playing their chosen card to be interactable.

1.2 SCRUM MASTER

Sophia Campola

1.3 SCRUM MEETING TIMES

March 17th (3:15 – 4:00), March 18th (12:00 – 1:00), March 20th (12:00 – 1:00), March 25th (12:00 – 1:00)

1.4 RISKS/CHALLENGES

- Team Coordination: All teams members working on the same HTML, CSS, and/or JavaScript file, even though we will provide comments for the code we write, will be difficult to coordinate each member's section of code to work together smoothly as one homunculus unit which could lead to git merge conflicts.
- Feature Integration: Since we will be, essentially, working on one feature at a time, there can be problems with integrating them into the UI, if our written logic doesn't match the envisioned design or with the features working together.
- Maintaining Data: Unless the UI stays consistent in its state management, there could be problems with retaining all inputted data relating to the user (bid amount, chosen trump suit).

2 CURRENT SPRINT DETAIL

2.1 REQUIREMENT 1

As a user, I will be able to play a chosen card each round

2.1.1 Tasks

Task description	Estimated time	Owner
Frontend	2 hours	Clayton
Backend	2 hours	Sophia
Database storage	4 hours	Alyssa

2.1.2 Acceptance criteria

If this user story is implemented successfully, a tester should be able to select the card they chose to be played, which will then allow the card to be placed into the card pile.

2.2 REQUIREMENT 2

As a user, I will be able to initially chose a bidding amount from 0-18 points

2.2.1 Tasks

Task description	Estimated time	Owner
Frontend	2 hours	Alyssa
Backend	3 hours	Clayton
Data storage	3 hours	Sophia

2.2.2 Acceptance criteria

If this user story is implemented successfully, a tester should be able to input the amount they are bidding for that round from 0-18, which their final round score must match or exceed to gain points.

2.3 REQUIREMENT 3

As a user, if I win the bid, I am able to chose the trump suit for that round

2.3.1 Tasks

Task description	Estimated time	Owner
Frontend	3 hours	Sophia
Backend	3 hours	Alyssa
Database	3 hours	Clayton

2.3.2 Acceptance criteria

If this user story is implemented successfully, a tester should be able to choose the trump suit for that round out of 4 choses: diamonds, clubs, spades, or hearts.
